■ Usenet client for downloading and previewing NZB files from Usenet servers. ■ Provides a multithreaded download mechanism. ■ Allows downloading NZB files through a specific URL. ■ Allows downloading multiple files at once using a batch download. ■ Allows running parallel downloads using multiple CPU cores. ■ Provides support for reading RAR, ZIP, 7-Zip and PAR2 archives. ■ Can resume interrupted downloads. ■ Includes an advanced download manager with command line options. ■ Configure your NNTP server settings using advanced settings. ■ Support for UPnP (DLNA) and DNLA (DLNA). ■ Can be used in a portable way. ■ Supports displaying NZB file lists in an attractive fashion. ■ Downloads only files that are not in use, automatically. ■ Allows you to convert temporary downloaded files to RAR archives. ■ Allows you to convert downloaded files into MP3, OGG, FLAC, and other audio formats. ■ Allows you to convert downloaded files into MP4, MOV, AVI, and other video formats. ■ Uses your default media player to preview downloaded files. ■ Allows you to set the default media player for previewing downloads. ■ Does not buffer downloaded files in memory. ■ Allows you to change the default file search location in the application. ■ Allows you to modify the default download folder. ■ Allows you to modify the default search path. ■ Allows you to connect to VPN networks to access Usenet without difficulty. ■ Uses secure SSL encryption to communicate with Usenet servers. ■ Uses IPv6 to communicate with Usenet servers. ■ Displays the Usenet's recent message log. ■ Configure the media previewing preferences. ■ Configure the size of your preview window. ■ Configure the general appearance of the application. ■ Includes an advanced torrent download manager. ■ Includes an advanced torrent download monitor. ■ Includes an advanced torrent download monitor. ■ Includes an advanced torrent download monitor. ■ Allows you to specify which torrent you want to download. ■ Includes an advanced torrent download monitor. ■ Configure your torrent settings. ■ Configure your torrent settings.

\* Supports the reading of the RAR archives with the help of the free and open source 7-Zip and WinRAR \* Extracts and lists the contents of the archives \* Supports the decoding of the RAR password through the use of the RC4 key \* Can decompress the archives with the 7-Zip and WinRAR \* Decodes the archives with the help of LZMA and LZW \* Encodes the archives with the help of LZMA and LZW \* Extracts the files contained in the archives with the help of the 7-Zip and WinRAR \* Opens and displays the media files contained in the archives \* Changes the default file browser after the conversion \* Enables you to save the media files into your computer \* Supports the creation and reading of the PNG, BMP, GIF, JPG and WMV media files \* Supports the conversion of the RAR and ZIP archives to the 7-Zip and WinRAR formats \* Has the integration with 7-Zip as well as the WinRAR to manage the archives \* Allows you to change the default port and NNTP host \* Changes the interface language \* Supports the configuration of the quality settings \* Has a built-in rss reader \* Has the program manager \* Contains the compatible with Python 2.7 and Python 3.4 features \* Has the global and local event logging \* Features the support of the standard and TrueCrypt methods \* Has the support for multiple CPU architectures \* Has the support for IPv6 \* Has the support for the large and small file sizes \* Has the support for the binary formats \* Has the support for the Usenet servers \* Has the support for the UPnP and DNLA for the network protocol \* Has the support for the SSL and MIME-types \* Has the support for the NAT traversal \* Has the support for the HTTP proxy \* Has the support for the FTP proxy \* Has the support for the SOCKS proxy \* Has the support for the remote connections \* Has the support for the local connections \* Has the support for the multiple sessions \* Has the support for the auto-reconnect \* Has the support for the hidden window mode \* Has the support for the link mode \* Has the support for the full-screen mode \* Has the support for the keyboard events \* Has the support for the mouse 81e310abfb

Binreader is a Usenet download manager that gives you the possibility to preview media files during downloads. It supports SSL encryption and IPv6, along with RAR and PAR2 files. Configure Usenet server settings At startup, you can configure server settings regarding the NNTP host, username and password, as well as the SSL encryption status (e.g. port 443 or 563). Additional options can be customized when it comes to the maximum number of connections to the server, buffer downloads in memory, and RAR handling mode (start extraction during downloads, extract after downloading and repairing). Furthermore, you can modify the default download folder and NZB monitoring directory, pick the preferred media player for previewing files and enter command-line parameters to extend its functionality, as well as specify the network timeout and retry time after waiting. Plain and simple interface The main application window has a minimalistic design and makes it easy to figure out its options. You can open a NZB file to add the downloading job to the task list, pause and resume the task, open a file with your default media player to preview contents, and visit a downloading folder's location on the disk without leaving the interface. Binreader enables you to change the UI language and skin, define the measurement unit for the downloading speed, exit or minimize the tool to the systray on close, as well as select a UPnP or DNLA TV device for live streaming.
