Pinocembrin (PB), a type of flavonoid, is found to be in many flavonoids. However, there are very few studies about the interactions of PB with other drugs. In this study, we investigated the influences of PB on the pharmacokinetics and pharmacodynamics of phenytoin (PHT). A single dose of PHT and PB (50 mg/kg, iv) was given to male Wistar rats. The results demonstrated that PHT was the substrates of hepatic microsomal CYP450 enzymes, and PB significantly inhibited the metabolism of PHT in the liver. Compared with PHT, the plasma concentration and the area under the plasma concentration-time curve increased, whereas the maximum plasma concentration and the maximum concentration in blood decreased in the PHT/PB groups. Moreover, compared with the control group, the loss of consciousness time was prolonged in the PHT/PB groups. Thus, PHT was shown to be a significant substrate of CYP3A4. In addition, the inhibitory effects of PB on PHT metabolism may be related to its pharmacological activity.Q: Trouble using Invoke-Command with variable Im trying to run a powershell command using a variable from a variable that is created by a function, but I cant get it to work. Im getting an error saying "The variable 'DOMAINNAME' is undefined" This is the code I am using: Function create-conn {
